

RepoQuest Team Brief

Project status, next steps, and 6-person workflow for the IBM Bob Hackathon

Working MVP	Public + private repo paths	Bob evidence plan	Submission checklist
-------------	-----------------------------	-------------------	----------------------

Project: RepoQuest: First PR Simulator

Date: May 16, 2026

Repository: github.com/vpetrova3/repoquest-first-pr-simulator

One-sentence pitch: RepoQuest helps a new developer go from an unfamiliar GitHub repository to a safe, meaningful first pull request by generating a repository overview, guided onboarding missions, mentor hints, test suggestions, and a reviewer-ready first PR plan.

Current status	What this means
MVP built	The app runs locally and demonstrates the full RepoQuest flow.
Public repos work immediately	No token needed for normal public GitHub analysis.
Private repos supported	Start the server with GITHUB_TOKEN for private repository analysis.
Bob evidence docs ready	Prompts, export instructions, and bob_sessions folder are in place.

What We Have Done So Far

- Built a working browser-based MVP with repository URL input.
- Added repository overview, tech stack summary, key files, architecture map, mission dashboard, mission details, mentor hints, suggested tests, first PR plan, and readiness report.
- Added private repository support through a server-side GitHub token path.
- Added IBM Bob prompt pack, Bob workflow docs, demo script, submission checklist, and bob_sessions instructions.
- Added CONTRIBUTING.md with clone, branch, commit, push, and pull request workflow.

Run locally:

```
git clone https://github.com/vpetrova3/repoquest-first-pr-simulator.git
cd repoquest-first-pr-simulator
node scripts/serve.mjs
```

Open <http://localhost:4173>

Private repo mode:

```
export GITHUB_TOKEN="your_read_only_token_here"
node scripts/serve.mjs
```

Do not commit the token or include it in screenshots, Bob exports, or slides.

LabLab / IBM Bob Requirements

Requirement	Team action
Public GitHub repository	Keep the final submission repo public. Private repos may reduce judge visibility.
Exported IBM Bob report	Add relevant Bob task markdown exports and consumption screenshots to bob_sessions/.
Demo application URL	Deploy the app and verify the URL from a clean browser.
Video presentation	Keep it under five minutes and show Bob usage clearly.
Cover image and slides	Prepare 16:9 cover image and concise slide deck.
Submission text	Prepare title, short description, long description, tags, app platform, and notes.

Judging criteria to optimize for: application of technology, presentation, business value, and originality.

6-Person Task Distribution

Replace the owner labels with real names. The point is one clear owner per workstream, with help from others as needed.

1. Product / Integration Lead Owner: You or final project coordinator Deliverables: • Final scope • PR review / merge discipline • End-to-end demo readiness Next actions: • Choose final demo repo • Keep main stable • Confirm all submission artifacts exist	2. Frontend / UX Polish Owner Owner: Technical teammate Deliverables: • Polished app flow • Clear UI copy • Responsive layout Next actions: • Polish mission cards and report • Check mobile layout • Coordinate screenshots with pitch lead
3. Repo Analysis / GitHub API Owner Owner: Technical teammate Deliverables: • Reliable public/private repo analysis • Demo data quality • Known limitations Next actions: • Test several public repos • Test GITHUB_TOKEN flow • Improve file scoring if needed	4. IBM Bob Evidence Lead Owner: Technical or semi-technical teammate Deliverables: • Bob task exports • Consumption screenshots • Clean bob_sessions folder Next actions: • Run Bob prompts • Export markdown reports • Scrub screenshots for secrets
5. QA / Deployment Owner Owner: Technical teammate Deliverables: • Live app URL • Smoke tests • Final technical checklist Next actions: • Deploy app • Test public/private flows • Verify clean clone setup	6. Pitch / Slides / Video / Submission Lead Owner: Less technical teammate Deliverables: • Slides • Cover image • Video script/recording • LabLab form text Next actions: • Create 16:9 cover • Draft 5-minute story • Prepare title/descriptions/tags

Immediate Workflow

1. Everyone pulls latest main and runs the app locally.
2. Team chooses the final demo repository.
3. Bob Evidence Lead runs prompts from docs/bob-prompts.md.
4. Frontend and Repo Analysis owners polish around the chosen demo repo.
5. QA / Deployment owner deploys and tests the app URL.
6. Pitch lead drafts slides and video script using docs/demo-script.md.
7. Integration lead checks all submission requirements and approves final scope.

Time window	Focus
Now	Pull latest repo, assign roles, choose final demo repo, confirm everyone can run the app.
Next 3-6 hours	Run Bob sessions, export reports, polish app, deploy, draft slides and submission copy.
Final push	Record video, add Bob exports, verify public repo and app URL, submit on LabLab.

IBM Bob Evidence Plan

- Run Bob tasks for repository analysis, mission generation, first PR plan, RepoQuest app review, and README/demo polish.
- Export each important Bob task history as a markdown file.
- Screenshot each task session consumption summary.
- Place all exports and screenshots in bob_sessions/.
- Before committing, inspect every screenshot/report for credentials, API keys, tokens, or private data.

Recommended file	Purpose
2026-05-16_repo-analysis.md	Bob analysis of chosen demo repo
2026-05-16_repo-analysis-consumption.png	Bob consumption screenshot
2026-05-16_mission-generation.md	Bob-generated onboarding missions
2026-05-16_first-pr-plan.md	Bob-generated PR plan
2026-05-16_app-review.md	Bob review of RepoQuest itself

Final Submission Checklist

- Public GitHub repo
- Exported IBM Bob reports in bob_sessions/
- Task session consumption screenshots in bob_sessions/
- Deployed application URL
- Demo video under five minutes
- Slide presentation
- 16:9 cover image
- Project title under 50 characters
- Short description under 255 characters
- Long description over 100 words
- Technology/category tags
- No secrets or credentials committed

Judging Strategy

Criterion	How RepoQuest should show it
Application of Technology	Show Bob-powered repo understanding, mission generation, test suggestions, and first PR planning.
Presentation	Keep the story simple: unfamiliar repo to guided missions to first PR readiness.
Business Value	Emphasize onboarding for interns, new hires, open-source contributors, and hackathon teammates.
Originality	Make clear this is a first-PR simulator, not just a README generator.
